## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 6, 7, 9, 11-19, 21-24, 26, 27 and 29-31 are allowed.
2. The following is an examiner's statement of reasons for allowance:

*Claims 6, 7, 9, 16/6, 16/7, 16/9, 17 and 18*

None of the prior art of record teaches or suggests an image forming method comprising the step of conveying the thin layer of developer formed on the developer carrying member to a development zone facing the latent image carrying member; wherein the developer conveyance member conveys the developer using electrostatic effect to supply the developer to the developer carrying member, and a relationship of  $|V_s| > |V_d|$  holds where  $V_d$  represents a surface movement velocity of the developer carrying member, and  $V_s$  represents a developer conveyance velocity of the developer moving on the developer conveyance member.

*Claims 11 and 16/11*

None of the prior art of record teaches or suggests an image forming method comprising the step of conveying the thin layer of developer formed on the developer carrying member to a development zone facing the latent image carrying member; wherein a developer charge amount changing means or changing an amount of electrical charge of the developer on the developer carrying member is arranged downstream of the development zone and upstream of the developer supply zone along the surface movement direction of the developer carrying member.

*Claims 12-15, 16/12, 16/13, 16/14 and 16/15*

None of the prior art of record teaches or suggests an image forming method comprising the step of conveying the thin layer of developer formed on the developer carrying member to a

development zone facing the latent image carrying member; wherein an electrically conductive member for applying a voltage to the developer on the developer carrying member is arranged downstream of the development zone and upstream of the developer supply zone along the surface movement direction of the developer carrying member.

*Claims 19, 21-24, 26, 27 and 29-31*

None of the prior art of record teaches or suggests an image forming apparatus comprising a supply roller configured to supply the toner from the toner hopper to the electrostatic conveyance member by a rotation; wherein the electrostatic conveyance member comprises a pattern of electrodes configured to set up an electric field along the electrostatic conveyance member, and wherein a toner forms a layer on a surface of the development roller, the toner is applied by an electrical field to the electrostatic latent image on the photoconductive drum, formed a toner image, and wherein the development roller and the photoconductive drum are separated by a gap.
